Strong understanding of design principles, **UX/UI design, CSS, front-end** development tools and **Frameworks (Bootstrap)**. And responsive design, Backend experience, using **Node Js** together with Express, including databases.

Excellent English level and **communication skills**.

Proficiency with **Git source control**.

Understanding of **Typescript**

Positive attitude, broad problem-solving skills, strong work ethic, a strong drive for results, motivation and leadership.

Front End developer | Freelancer 2022

Help solve problems in the front end of web pages. Using Javascript and Html. I also worked for a Mexican startup creating WordPress pages.

Front End developer Marketing agency web app | June 2022

I developed a website that simulates a marketing agency, together with a colleague from college. To create it I used CSS, HTML, and pure Javascript along with Node Js with Express for the backend.

In it, people could use a calculator that simulated the earnings they could get by working with the agency.

Front End developer & Creator Decidite | Buenos Aires, Argentina | Present

Developed a complete Android app from scratch with React Native.

Decidite is an application that helps people to choose their vocation, through vocational tests.

An application which has an integrated chat system managed with firebase firestore, a test which people can solve to choose their vocation and a section where they can add faculties to the profile (from the next update).

I managed to form a team of 20 psychologists who helped me in the progress of the application.

Decidite is currently on the play store with +350 users.

Front End developer Amaze App | Present

I developed a complete eCommerce application from scratch similar to amazon, using React for the Frontend together with Node Js with Express for the Backend.

In the application, users can make purchases, view a history of purchases made, and filter products by price range, characteristics, etc.
